(54) Title: USE OF GENETIC POLYMORPHISMS THAT ASSOCIATE WITH EFFICACY OF TREATMENT OF INFLAMMATORY DISEASE

(57) Abstract: The MHC III region of chromosome 6p21.3 harbors a DNA sequence, most likely within the *TNF* or *LTA* gene, which influences response to pimecrolimus for the treatment of atopic dermatitis. Accordingly, genetic polymorphisms in the *TNF* and *LTA* genes are useful as biomarkers of the efficacy of pimecrolimus treatment of inflammatory disease. By contrast, response to tacrolimus appears to be influenced by other biological pathways.
